

Expand GrandFabric – Outdoor

An outdoor backwall for any weather conditions

A backwall when you want to display your message outside, regardless of the season. It is designed for long-term outdoor use and can be placed on different surfaces as it comes with several support options. It can also be used indoors (just add indoor feet).

Safety support parts for extra stability

To prevent the wall from overturning when it's windy, it comes with support profiles where you attach the backwall. In order to secure the wall to the ground, you can choose to either screw the frames onto a wooden surface, use the water tanks, or other suitable weights.

Note: For the wall to be secured, you must always use at least one of these safety devices, regardless of the weather.

Sizes and weight

Size: 232x240 cm
Depth: 160 cm
Weight: 31 kg

Size: 294x240 cm
Depth: 160 cm
Weight: 35 kg

Maximum wind speed

20 m/s when firmly attached to ground
(so it can't tip over or start to slide)

9 m/s if 100 kg ballast on support profile
(e.g. two water tanks)
